WINNER OF THE 2025 PEZCOLLER-AACR AWARD FOR CANCER RESEARCH LECTURE

Douglas Hanahan

Ludwig Institute for Cancer Research, Losanna

Prof. Hanahan was awarded the 2025 Pezcoller-AACR award for his fundamental discoveries in cancer research that have had far-reaching translational impact. He defined multi-step tumorigenesis by uncovering the molecular mechanisms required to drive cancer growth and helped establish the principle that malignant traits in cancer are conferred by cooperative interactions between cancer cells and co-opted host cells recruited into the tumor microenvironment. His innovative and multidisciplinary work has resulted in new therapeutic strategies and new drugs with multiple targets.

Thursday, MAY 15, at 12.00

Aula Magna

Polo Biologico «A. Vallisneri»

You are cordially invited
Stefano Piccolo
